

# ENSUREDR

## Make sure you DR site will work!

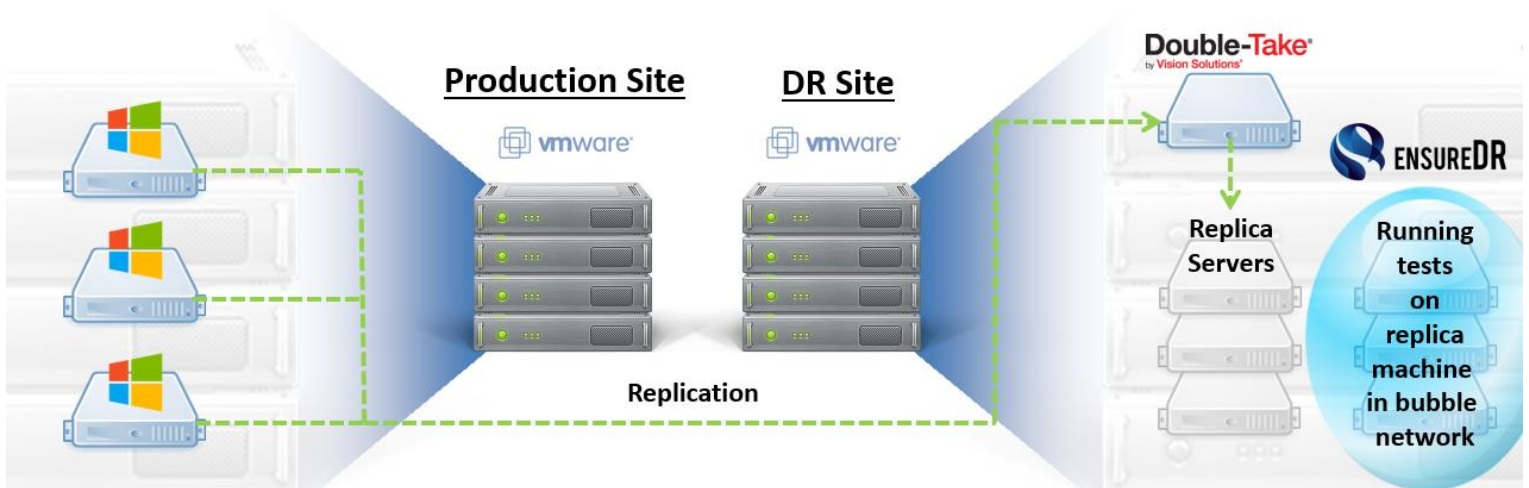

EnsureDR was built to make sure your DR site would work no matter what, it was designed to run scheduled automatic tests of your DR site

You want to prepare your data center to any case of disaster. Replicating your data isn't enough anymore. Usually you will check you DR site once a year. The result of your manually DR test will be a list of rejects to fix since you production environment is Dynamic and not all you settings and data was replicated in the past year. If a real disaster had happen, you had to fix this list of rejects in real time very fast.

EnsureDR was designed to run scheduled automatic tests of your DR site for you. When test had finished EnsureDR will send you the results to update you how well are you ready for real disaster scenario. You then can fix any issue much sooner than your actual manual test and by that make sure you are ready for any scenario.

EnsureDR Features:

- Double-Take integration
- Automate schedule DR test
- Automate Application test
- Predict DR problems before a disaster
- Create certified point in time
- Update IT for results by mail

Makes sure your DR site will work on disaster
